

The Agentic Foundation for Life Sciences

The Industry Crisis:

It costs **\$1.3B - \$2.6B** and **10 - 15 years** to bring a single drug to market, yet **90% of candidates fail**. Fragmented knowledge across siloed data sources slows discovery and decision-making at every stage.

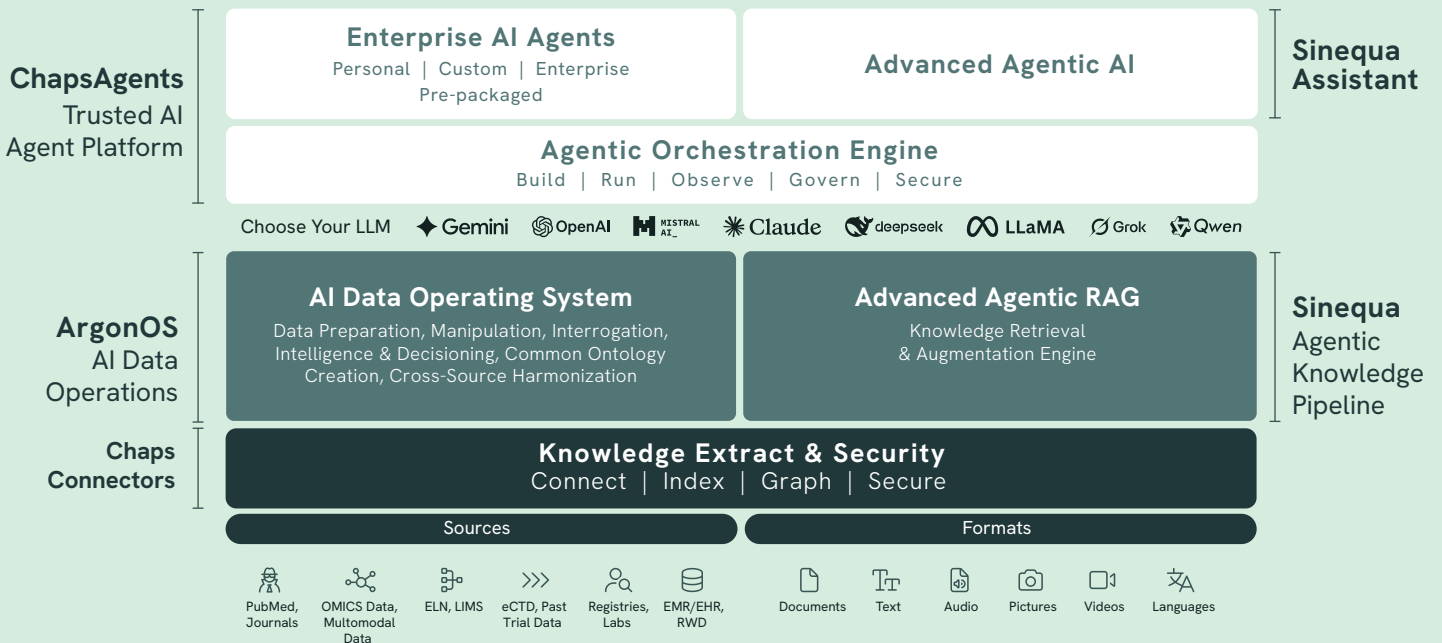

Enterprise Knowledge Base:

The knowledge exists, but it is trapped in silos and fragmented data. Without unifying it, every decision and every outcome is compromised. Accurate, secure, and governed knowledge is not optional. It is the foundation everything else is built on.

The Agentic Future:

ChapsVision helps you move From Data to Decisions, Radically Fast by connecting fragmented data to power AI agents with real scientific context.

The Enterprise Agentic AI Platform

Strategic Impact & Regulated Trust

Trustworthy Agentic AI That Thrives on Your Most Complex Data

To move beyond "PoC Purgatory", agents must be grounded in reliable knowledge and strictly governed. Our platform is built on three core pillars: Reliable, Secure, and Governed.

Reliable Agents

Advanced Agentic RAG grounds AI agents in validated enterprise knowledge, enabling accurate, traceable, and context-aware reasoning while minimizing hallucinations.

Secure by Design

Enterprise-grade security protects sensitive engineering and scientific data through role-based access, data isolation, and compliance-aligned controls across the agent lifecycle.

Governed at Scale

Built-in governance ensures transparency, auditability, and oversight with policies, human-in-the-loop workflows, and trusted operational controls for enterprise AI deployment.

Measured Impact Across Global Biopharma

3X

Faster Discovery

Accelerate target identification and hypothesis generation.

20%

R&D Efficiency

Eliminate evidence rediscovery and reuse institutional know-how.

\$143M

Saved

Improve Phase I/II pass-fail decisions by identifying risks earlier.

Trusted Across the Drug Development Lifecycle

Drug Discovery

Identify targets. Generate hypotheses. Move faster. Compress the knowledge-to-insight cycle and get to breakthroughs sooner.

Clinical Development

Unify study evidence and accelerate decisions, from protocol design to patient outcomes, AI grounded in real clinical context helps teams move science faster.

Pharmacovigilance

Stay ahead of safety signals with continuous, AI-driven detection and analysis across every stage of the drug lifecycle.

Radically Fast. Trustworthy. Agentic.
